

Quantum Windows Continued Product Improvement**Eurocell Eurologik and Eurocell Modus PAS24 Specifications****Single and Double Doors**

As part of our ongoing commitment to ensure we meet the latest test standards with regards to PAS24 compliance along with providing the best possible solutions, Quantum Windows has undertaken a range of PAS24 tests on both Eurocell Eurologik and Eurocell Modus single and double doors.

All testing has been carried out with both double and triple glazed beads enabling us to not only meet but exceed current building standards.

As part of this product improvement, we have taken the decision to switch the door hinges used. These will now be supplied as the ERA Classic Hinge. These not only have the same adjustments, but they have been tested to 300,000 cycles and achieved the higher class 5 rating for salt spray. As these hinges are a Fab & Fix product, they are also available in a greater colour range and will match perfectly with their respective colour matched hardware.

The Eurocell Eurologik doors have also been tested with the new upvc low threshold (EWS7150) which is available in white or black. This will allow for a range of ramps to be fitted to achieve Part M Compliance with ease. We are still able to supply the standard low aluminium threshold as this is an equivalent part compared to the new one tested.

Single Doors

Maximum 1000mm wide x 2200mm high frame size

Double Doors

Maximum 1800mm wide x 2200mm high frame size

We have used a recognised range of hardware produced by ERA Hardware and Ingenious Hardware.

Locks: Ingenious Hardware (with shootbolts only for double doors)

Hinges: ERA Classic Hinge

Cylinder: 3* ERA Cylinder

Handle: ERA Balmoral Lever/Lever

All parts have been added to the Window Designer software and Quantum Windows will be supplying this new specification as standard for any orders placed from Wednesday 1st April 2026.

If you require an alternative specification, please let us know at point of order.
